

MEDICORDS

A pathway between you
and your Doctor

WHAT IS MEDICORDS

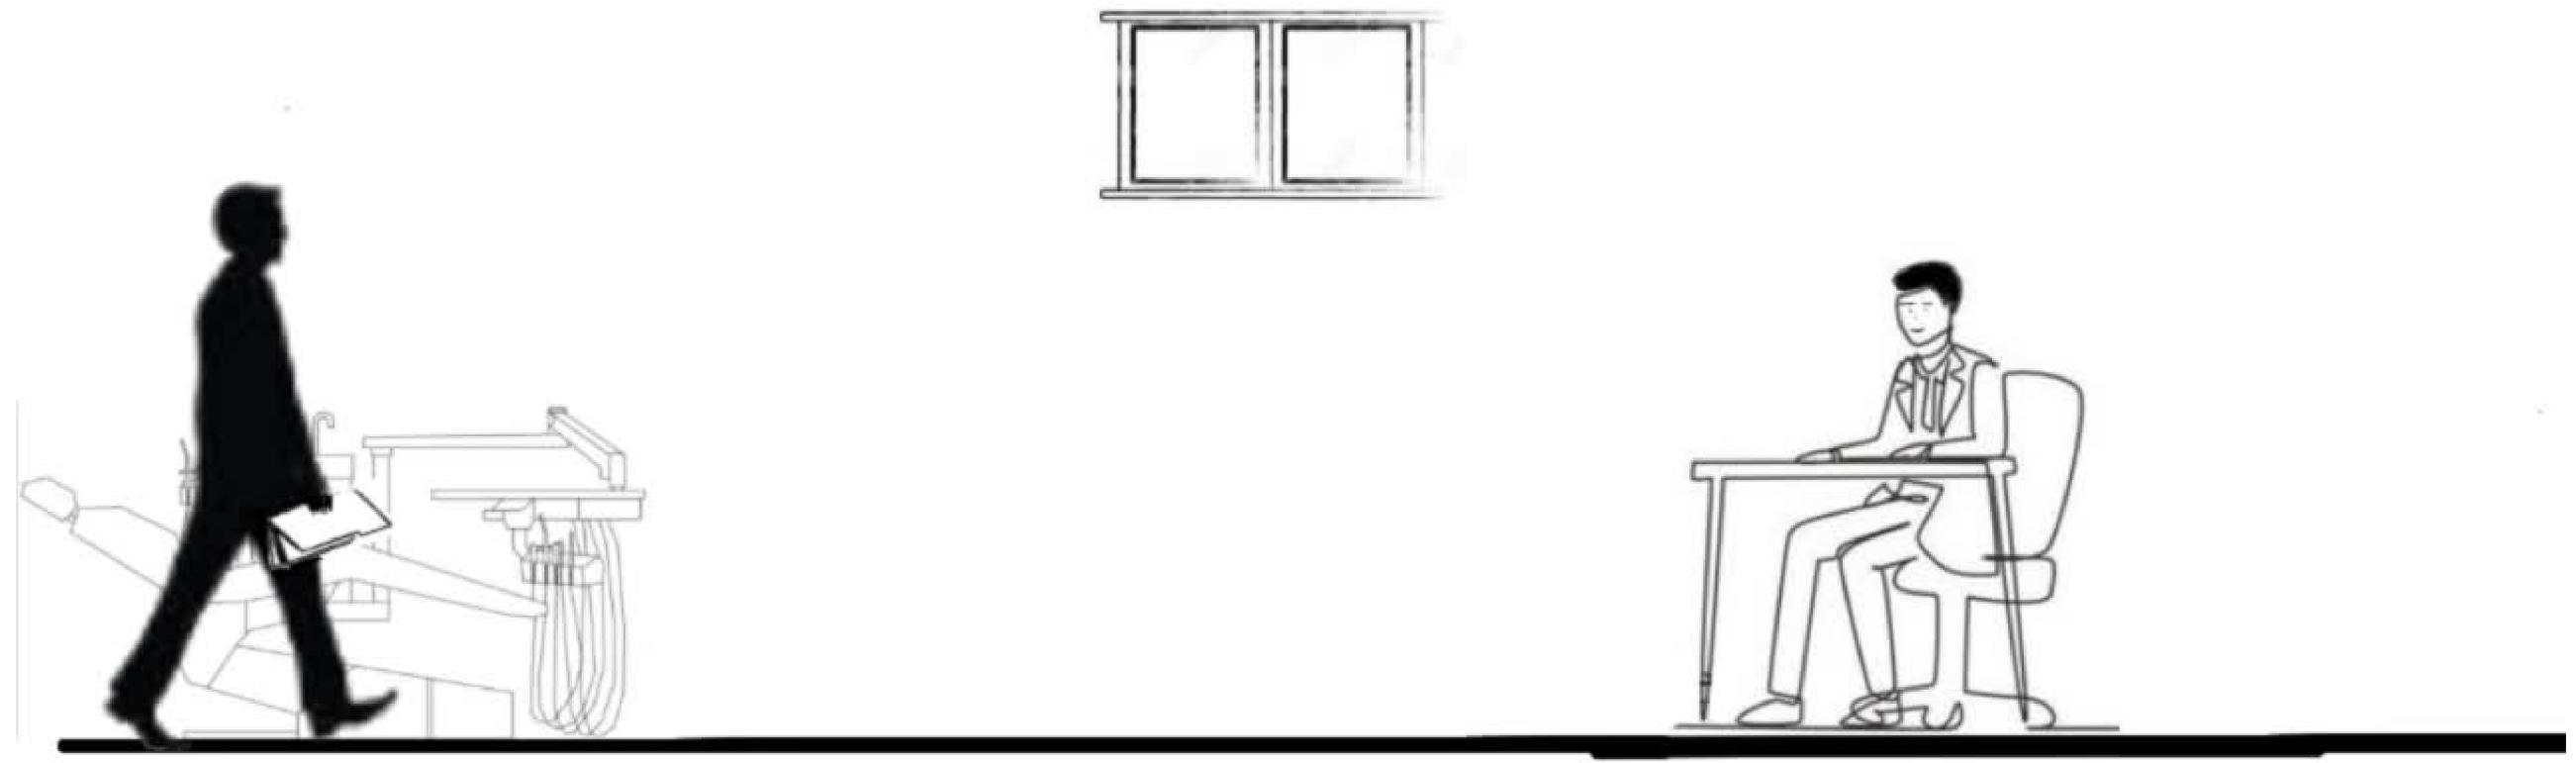

- It is a cloud-based data storage and developer-friendly website.
- It is a digital representation of patients' health information such as medical records, lab results, vital sign charts, medication, etc.

WHY MEDICORDS

- Currently there is no secure portal available where we can upload/store our medical records which can be accessed by both patients and hospitals/doctors.
- The government does not have correct or enough statistical data on what percentage of the population or which region is affected by which certain disease.

The background features a dark purple gradient with three semi-transparent, rounded rectangular shapes. One large shape is centered in the middle, another is in the upper left corner, and a third is in the lower left corner. All shapes have a soft blue-to-white gradient on their right side.

PROBLEM OVERVIEW

PROBLEM OVERVIEW

- At the moment, there isn't a secure portal where we can upload or save our medical records that both patients and hospitals/doctors can access
- The government lacks up-to-date statistical information on which diseases are prevalent where and in what proportions of the population.

PROBLEM SOLUTIONS

PROBLEM SOLUTIONS

Digitalization

It gives clinician intent access to all of a patients important medical records by digitizing them

Ease of Accessibility

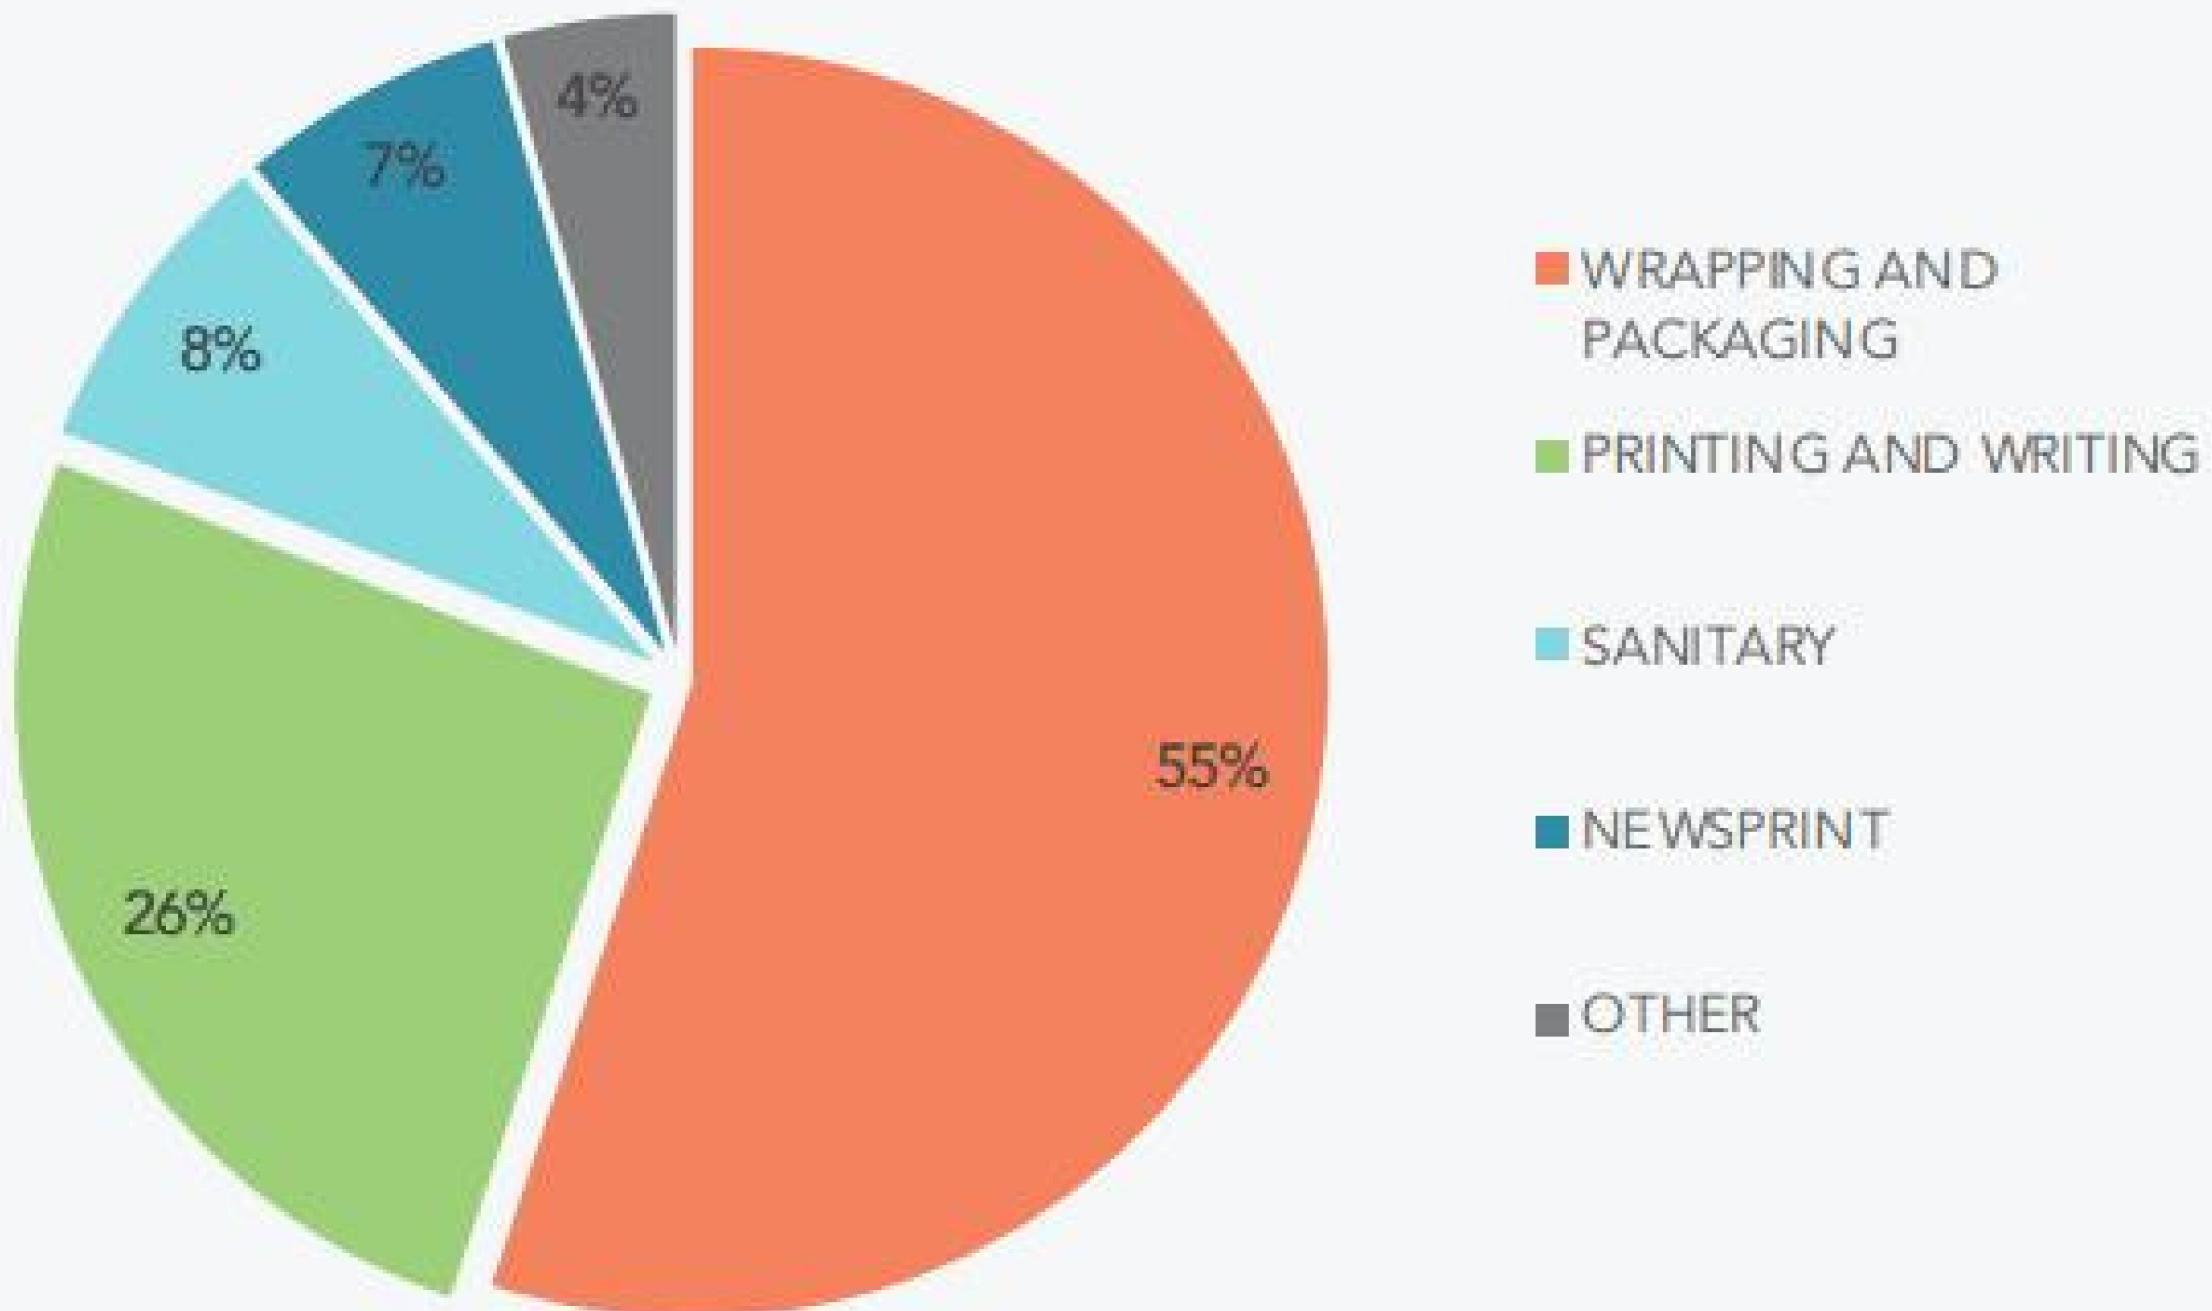

Only the user has access to their medical records, and they are in charge of whether or not the doctor can access it.

BETTER TREATMENT

Providing health record of a patient helps in formulating and applying a rational approach for the allocation of limited resources that are available for patient care and disease prevention.

“ Small things can
have big impact. ”

Protecting the environment

A single large pulp and paper mill can consume over 3.5 million tons of wood in a year.

The new digitalization feature saves paper by not printing a paper copy of the results. Instead, the results are sent to the physician directly through our website.

"MediCords is dedicated to improving access, affordability, quality and choice of health care."
